

Migrate. Secure. Manage.

Management Overview

Is security on your BI implementation's critical path? FirstQuarter's Security Studio for IBM Cognos minimizes the risk of unauthorized access and provides impressive efficiency improvements.

Security Studio is rapid deployment software that provides the exponential ROI that organizations seek in security management.

Imagine if...

IT could cost effectively address:

- Management of groups and memberships
- Complex security within Cognos Connection
- Complex data security at the model level
- Security audit reporting
- Migration from Series 7 namespace

Scale key hurdles with Security Studio

With Security Studio IT can:

- Centralize security administration
- Cut administration from man-days to minutes
- Plan/Stage security before building it
- Address data security audit concerns
- Migrate from Series 7 to other target namespaces

Realize immediate ROI like...

- **A global healthcare products company** massively deployed security in 10 highly complex cubes in less than a day. This would have been impossible using manual methods.
- **A leading high tech electronics company** reduced their administrative burden by more than 500,000 steps for a financial reporting application. This saved them hundreds of man-days.

Business Needs

- Governance and Compliance on information access
- Understand and minimize the risk of erroneous access
- Rapid, flexible response to changing business conditions

IT Needs

- To leverage existing security investment
- A cost effective method to design and manage security
- Accuracy across the entire lifecycle

Security Studio Delivers:

- Accuracy across the entire lifecycle
- A cost effective means of managing complex security requirements
- A way to minimize the risk of unauthorized access
- Auditability of security changes
- A reliably accurate way to implement security en masse
- A repeatable process that gets security right every time.
