

Migrate. Secure. Manage.

Technical Overview

Time consuming security administration. Complex security designs. High administrative burden. These are all key issues faced by administrators.

Enter FirstQuarter's Security Studio – software designed to address security concerns with IBM Cognos that reduces security implementation from man-days to minutes.

Product Features

Security Studio tools work across both Cognos 8 and Series 7. Key modules include:

Namespace Management Tools make working with groups and memberships a breeze.

Content Management Tools streamline security configuration tasks across Cognos Connection.

Data Security Tools allow IT to implement complex data and object security in less than a day.

Reporting provides broad and deep visibility into Cognos environment that addresses the question, “who has access to what?”

Delegated Security Tools relieve the burden on IT by delegating the ongoing membership management process to the business.

Metric Manager Tools facilitate broad and deep security within Metrics Manager.

Security Studio tools work together to dramatically reduce the administration time associated with designing and implementing security.

Business Needs

- Governance and Compliance on information access
- Understand and minimize the risk of erroneous access
- Rapid, flexible response to changing business conditions

IT Needs

- To leverage existing security investment
- A cost effective method to design and manage security
- Accuracy across the entire lifecycle

Security Studio Delivers:

- Accuracy across the entire lifecycle
- A cost effective means of managing complex security requirements
- A way to minimize the risk of unauthorized access
- Auditability of security changes
- A reliably accurate way to implement security en masse
- A repeatable process that gets security right every time.
